Serious vs Non-Serious Case Assessment Report.

Case	Drug and event	Classification	Seriousness basis	Expectedness	Reporting timeline	Rationale and limitations
SYN-PV-005	Ciprofloxacin and tendon pain	Serious, expected	Other medically important condition	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Reported as medically important, so I treated it as serious (E2A medical judgement). The reason is not stated, so medical review should confirm. Tendon pain with a fluoroquinolone can lead to tendon rupture, which supports medical importance, but no rupture is reported. Not recovered at follow-up, but disability is not stated, so I did not count it.
SYN-PV-006	Sertraline and dizziness	Serious, expected	Other medically important condition	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Reported as medically important, so I treated it as serious (E2A medical judgement). The reason is not stated, so medical review should confirm.
SYN-PV-007	Omeprazole and headache	Serious, expected	Other medically important condition	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Reported as medically important, so I treated it as serious (E2A medical judgement). The reason is not stated, so medical review should confirm. Reported by a consumer, so seriousness should be confirmed with a healthcare professional.
SYN-PV-008	Losartan and fatigue	Non-serious, unexpected	None reported	Unexpected	No expedited report. Routine and periodic review; watch for a signal.	No seriousness criterion is reported, so I classed it as non-serious. Severity is not stated and is separate from seriousness. The reaction is not listed in the Synthetic Core Data Sheet v1.0, so it is unexpected.
SYN-PV-009	Amoxicillin and rash	Serious, expected	Other medically important condition	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Reported as medically important, so I treated it as serious (E2A medical judgement). The reason is not stated, so medical review should confirm.
SYN-PV-010	Atorvastatin and myalgia	Serious, expected	Hospitalisation	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Hospitalisation is reported, so the case is serious. The reason and length of admission are not stated.
SYN-PV-011	Metformin and nausea	Serious, expected	Other medically important condition	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Reported as medically important, so I treated it as serious (E2A medical judgement). The reason is not stated, so medical review should confirm. Reported by a consumer, so seriousness should be confirmed with a healthcare professional.
SYN-PV-012	Amlodipine and peripheral oedema	Serious, expected	Other medically important condition	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Reported as medically important, so I treated it as serious (E2A medical judgement). The reason is not stated, so medical review should confirm. Not recovered at follow-up, but disability is not stated, so I did not count it.

Case	Drug and event	Classification	Seriousness basis	Expectedness	Reporting timeline	Rationale and limitations
SYN-PV-013	Ciprofloxacin and tendon pain	Serious, expected	Other medically important condition	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Reported as medically important, so I treated it as serious (E2A medical judgement). The reason is not stated, so medical review should confirm. Tendon pain with a fluoroquinolone can lead to tendon rupture, which supports medical importance, but no rupture is reported. Not recovered at follow-up, but disability is not stated, so I did not count it.
SYN-PV-014	Sertraline and dizziness	Serious, expected	Hospitalisation	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Hospitalisation is reported, so the case is serious. The reason and length of admission are not stated.
SYN-PV-015	Omeprazole and headache	Serious, expected	Hospitalisation	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Hospitalisation is reported, so the case is serious. The reason and length of admission are not stated.
SYN-PV-016	Losartan and fatigue	Non-serious, unexpected	None reported	Unexpected	No expedited report. Routine and periodic review; watch for a signal.	No seriousness criterion is reported, so I classed it as non-serious. Severity is not stated and is separate from seriousness. The reaction is not listed in the Synthetic Core Data Sheet v1.0, so it is unexpected. Not recovered at follow-up, but disability is not stated, so I did not count it.
SYN-PV-017	Amoxicillin and rash	Serious, expected	Other medically important condition	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Reported as medically important, so I treated it as serious (E2A medical judgement). The reason is not stated, so medical review should confirm.
SYN-PV-018	Atorvastatin and myalgia	Serious, expected	Hospitalisation	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Hospitalisation is reported, so the case is serious. The reason and length of admission are not stated. Not recovered at follow-up, but disability is not stated, so I did not count it.
SYN-PV-019	Metformin and nausea	Non-serious, expected	None reported	Known	No expedited report. Routine and periodic reporting.	No seriousness criterion is reported, so I classed it as non-serious. Severity is not stated and is separate from seriousness.
SYN-PV-020	Amlodipine and peripheral oedema	Serious, expected	Hospitalisation	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Hospitalisation is reported, so the case is serious. The reason and length of admission are not stated.
SYN-PV-021	Ciprofloxacin and tendon pain	Serious, expected	Other medically important condition	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Reported as medically important, so I treated it as serious (E2A medical judgement). The reason is not stated, so medical review should confirm. Tendon pain with a fluoroquinolone can lead to tendon rupture, which supports medical importance, but no rupture is reported.
SYN-PV-022	Sertraline and dizziness	Non-serious, expected	None reported	Known	No expedited report. Routine and periodic reporting.	No seriousness criterion is reported, so I classed it as non-serious. Severity is not stated and is separate from seriousness. Not recovered at follow-up, but disability is not stated, so I did not count it.

Case	Drug and event	Classification	Seriousness basis	Expectedness	Reporting timeline	Rationale and limitations
SYN-PV-023	Omeprazole and headache	Serious, expected	Hospitalisation	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Hospitalisation is reported, so the case is serious. The reason and length of admission are not stated.
SYN-PV-024	Losartan and fatigue	Serious, unexpected	Hospitalisation	Unexpected	Expedited: 15 calendar days from first receipt (7 days if it is later found to be fatal or life-threatening).	Hospitalisation is reported, so the case is serious. The reason and length of admission are not stated. The reaction is not listed in the Synthetic Core Data Sheet v1.0, so it is unexpected.
SYN-PV-025	Amoxicillin and rash	Serious, expected	Other medically important condition	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Reported as medically important, so I treated it as serious (E2A medical judgement). The reason is not stated, so medical review should confirm.
SYN-PV-026	Atorvastatin and myalgia	Serious, expected	Other medically important condition	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Reported as medically important, so I treated it as serious (E2A medical judgement). The reason is not stated, so medical review should confirm. Not recovered at follow-up, but disability is not stated, so I did not count it.
SYN-PV-027	Metformin and nausea	Serious, expected	Other medically important condition	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Reported as medically important, so I treated it as serious (E2A medical judgement). The reason is not stated, so medical review should confirm.
SYN-PV-028	Amlodipine and peripheral oedema	Non-serious, expected	None reported	Known	No expedited report. Routine and periodic reporting.	No seriousness criterion is reported, so I classed it as non-serious. Severity is not stated and is separate from seriousness.
SYN-PV-029	Ciprofloxacin and tendon pain	Serious, expected	Other medically important condition	Known	No expedited report under E2A (expected). Periodic report. Local rules often ask for 15 days for any serious case, so check.	Reported as medically important, so I treated it as serious (E2A medical judgement). The reason is not stated, so medical review should confirm. Reported by a consumer, so seriousness should be confirmed with a healthcare professional. Tendon pain with a fluoroquinolone can lead to tendon rupture, which supports medical importance, but no rupture is reported.

Summary

Category	Cases	Reporting
Serious, unexpected	1	Expedited, 15 calendar days (SYN-PV-024)
Serious, expected	19	Periodic report under E2A; check the local rule
Non-serious, unexpected	2	Routine and periodic review (SYN-PV-008, SYN-PV-016)
Non-serious, expected	3	Routine and periodic reporting

Overall 20 cases are serious and 5 are non-serious. No case is reported as fatal or life-threatening, so the 7-day rule is not triggered.
